Exploring the Landscape of Data Modernization for the Virgin Islands

Sudha Meghan, MD

June 14, 2023

What's the journey?

- A snapshot of today
- The vision for health infrastructure and information
- Best practices of digital transformation
- Unique considerations for USVI
- Stepping into data modernization

The Vision for Data Modernization

- Bridging information and technology with people and processes
- Creating a proactive public health and care delivery
- Developing a coordinated and collaborative health ecosystem

Unique Considerations for USVI

- Keeping a pulse and on the culture and language as it connects with health
- Evaluating the best practices of digital transformation for public health

People and Operations

- Planning the deployment requires a well orchestrated change management approach
- Reviewing the alignment with existing processes is critical for identifying training and onboarding gaps

Looking Forward

- Enabling local teams to lead systems management and maintenance over time
- Establishing longitudinal care for patients, providers, and community organizations
- Prioritizing current infrastructure and community needs including mental health, health education, and resource access
